DETAILED ACTION

Allowable Subject Matter

1. Claims 1-2 and 4-5 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claim 1 recites a method of manufacturing a diffusing reflector comprising the processes of preparing a substrate; forming a first resin film; providing a gathering of adjacent pillar-shaped bodies isolated from each other through patterning of said resin film; said first resin film is patterned by straight connected lines that form a continuous polygonal pattern, said straight connected lines providing a continuous and substantially uniform gap between any two of said adjacent polygonal pillar-shaped bodies thereby forming a rectilinear honeycomb-like pattern; said gap is substantially constant throughout the honeycomb-like pattern and has a size equal to about a minimum resolution of said photolithography. None of the prior art of record alone or in combination discloses the claimed invention.
3. *Tsuda et al. (US 5,936,688)* discloses a method of manufacturing a diffusing reflector comprising the processes of preparing a substrate; forming a first resin film; providing a gathering of adjacent pillar-shaped bodies isolated from each other through patterning of said resin film; said first resin film is patterned by straight connected lines that form a continuous polygonal pattern, said straight connected lines providing a continuous and substantially uniform gap between any two of said adjacent polygonal pillar-shaped bodies thereby forming a rectilinear honeycomb-like pattern. However, *Tsuda* does not disclose wherein said gap is substantially constant throughout the

honeycomb-like pattern and has a size equal to about a minimum resolution of said photolithography, now would it have been obvious to do so in combination.

4. *Nakamura et al.* (US 5,847,789) discloses a method of manufacturing a diffusing reflector comprising the processes of preparing a substrate; forming a first resin film; providing a gathering of adjacent pillar-shaped bodies isolated from each other through patterning of said resin film; said first resin film is patterned by straight connected lines that form a continuous polygonal pattern. However, *Nakamura* does not disclose said straight connected lines providing a continuous and substantially uniform gap between any two of said adjacent polygonal pillar-shaped bodies thereby forming a rectilinear honeycomb-like pattern, or wherein said gap is substantially constant throughout the honeycomb-like pattern and has a size equal to about a minimum resolution of said photolithography, nor would it have been obvious to do so in combination.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
